

iSeries Security Software

Bsafe/Global Security

Comprehensive Intrusion Prevention and Detection

Now that many AS/400 iSeries systems are connected to the internet via TCP/IP, it is necessary to secure your IBM midrange systems with BSafe's Global Security solution.

BSafe's intrusion detection and prevention protects TCP/IP, SNA, and systems services connections from attack.

Internal Protection

Internal security threats have always been a concern for AS/400 administrators, but never has a solution been so dynamic, specific, and easy-to-use.

With the BSafe security software for the iSeries, you can restrict access to specific users or groups, and specify exactly which objects and commands they can access through BSafe's intuitive GUI.

Monitoring Auditing Tools

Via QUADJRN & CHGOBJAUD, you can obtain a minimal level of reporting and journaling for your iSeries AS/400 systems, but neither provides the drill-down capabilities of BSafe. BSafe provides reporting and journaling down to field details of the query. This software comes with 64 built-in reports, and the ability to create and reuse custom reports as needed.

Maintain Integrity

BSafe's Dataflow tool allows you to manage multiple filtered searches to search for altered files and fields, providing "before" and "after" snapshots of files and data.

Regulatory Compliance

BSafe can help bring your IBM midrange servers into compliance with the US Sarbanes-Oxley Acts, and other regulatory acts, by allowing you to log, track, and audit data changes.

Network Traffic Analyzer

Monitor network traffic and trends in realtime with the network traffic analyzer. This sophisticated filtering and display module can dynamically display when files are accessed, changed, and deleted. Create charts, graphics, and tables based on event types, users or other criteria, to provide you with the top-level overview you need to review and change security policies.

Certified

BSafe is an IBM "Server Proven" software solution and complies with ISO 17799, IT's most widely recognized security standard.

Services

As an IBM Premier Business Partner, and authorized reseller of BSafe iSeries security, we are one of the few qualified resellers in the country. We have the technical resources necessary to correctly configure your hardware and software.

Integration

Look to a trusted business partner like North American Systems to get your BSafe security software installed correctly the first time. We can walk you through the installation process remotely, or do it ourselves, saving you the pain and time of implementation.

Although the GUI is intuitive, NASI offers training built into the license price, so your IT professionals can fully understand and utilize your BSafe software solution.

Experience

Founded as an IBM shop for AS/400 systems, we have thrived in the marketplace by providing the appropriate solutions every time. Our superb customer satisfaction score from IBM's independent rating service is a testament of our consistent dedication to creating and keeping satisfied customers.

Evaluation

If you are still struggling to decide, or are struggling to fit this solutions into your IT budget, North American Systems can help. We offer financing and leasing options, and can perform an online web-based presentation and teleconference to show you the software live. You can even demo the software on-site for 30 days if needed.
